

Novel Coronavirus

What is novel coronavirus?

Novel coronavirus (COVID-19) is a new virus strain spreading from person-to-person in China and other countries, including the United States. In some instances, cases outside of China have been associated with travelers from China. Health experts are concerned because little is known about this new virus and it has the potential to cause severe illness and pneumonia in some people.

How does novel coronavirus spread?

Health experts are still learning the details. Currently, it is thought to spread:

- via respiratory droplets produced when an infected person coughs or sneezes.
- between people who are in close contact with one another (within about 6 feet).

* Droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs.

How severe is novel coronavirus?

Experts are still learning about the range of illness from novel coronavirus. Reported cases have ranged from mild illness (like a common cold) to severe pneumonia that requires hospitalization. So far, deaths have been reported mainly in older adults who had other health conditions.

What are the symptoms?

People who have been diagnosed with novel coronavirus have reported symptoms that may appear in as few as 2 days or as long as 14 days after exposure to the virus:
